DATE MAILED: 09/20/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/826,096

Applicant(s)

DANTOLAN, HARRY E.

Examiner

Allana Lewin

Art Unit

3764

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 16 April 2004.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3, 6 and 8 is/are rejected.
- 7) ☒ Claim(s) 4, 5, 7, 9 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 16 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dantolan (US Pat. No. 5,474,511) in view of Buchner (US Pat. No. 3,761,083).

Dantolan discloses a reciprocating weight exercise device comprising a rigid tube with a first and a second end (see proximate lead line 1), first and second coil springs (see proximate lead lines 8 and 7) with the tube deployed within the coil springs (note Figure 3B), a permanent weight between the coil springs that is adapted for sliding along the length of the tube and able to compress the coil springs (note Figure 3B), a first slidable handle (see proximate lead line 13), adapted for sliding along the length of the tube (column 3, line 46-48) adjacent to the first coil spring (note Figure 3B), and a second slidable handle (see proximate lead line 14), adapted for sliding along the length of the tube (column 3, line 46-48) adjacent to the first coil spring (note Figure 3B).

Dantolan fails to disclose stationary handles or shock absorbing means on each end of the tube.

Buchner teaches an exercise device with first and second stationary handles affixed to each end of the tube (see proximate lead lines 5 and 7), as well as a spring

(see proximate lead line 13) positioned on the tube adjacent to the stationary handle (note Figure 1) which functions as a resistance means but also inherently as a shock absorbing means.

Based on the teachings of Buchner, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized stationary handles with the Dantolan device to provide a more secure and stable grip while using the device, as well as to allow for more exercises to be performed with the device thereby increasing its functionality. Furthermore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized shock absorbing means with the Dantolan device so as to lessen the impact on a user's hands, thereby preventing injury and discomfort, making the device safer and more enjoyable to use.

Regarding claims 2 and 3, a tube with swaged end is an obvious design choice and does not have any patentable weight. There are numerous methods in which the stationary handles can be affixed to the tube that would prevent them from leaving the device. Further, the slidable handles would be maintained on the tube by the stationary handles.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dantolan in view of Buchner as applied to claims 1-3 above, and further in view of Breems (US Pat. No. 5,755,644).

Dantolan as modified by Buchner, discussed above, fails to disclose the shock absorbing means to include an O-ring and a bushing.

Breems discloses an exercise device comprising an elongated tubular member that, in use, is subjected to a force and therefore employs shock absorbers comprising an O-ring and a bushing (column 7, lines 17-29) in order to resist shock from impact.

Based on the teaching of Breems and that it is very common for shock absorbers to be composed of O-rings and bushings, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized an O-ring and a bushing in Dantolan modified supra so as to enhance the shock absorption of the device, thereby adding more protection and comfort to one using the device.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dantolan in view of Buchner as applied to claims 1-3 above, and further in view of Wilkinson (US Pat. No. 5,788,608).

Dantolan as modified by Buchner, discussed above, fails to disclose the shock absorbing means to include a bushing.

Wilkinson discloses an exercise device that includes a shaft that is subjected to a force and thus further comprises a shock-absorbing embodiment including a spring and a bushing (column 12, lines 34-37) that functions to counteract the shock from the imparted force.

Based on the teaching of Wilkinson and that it is very common for shock absorbers to be composed of a spring and a bushing, it would have been obvious to

Art Unit: 3764

one having ordinary skill in the art at the time the invention was made to have utilized a bushing in Dantolan modified supra so as to enhance the shock absorption of the device, thereby adding more protection and comfort to one using the device.

***Allowable Subject Matter***

Claims 4, 5, 7 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Although applied above to claim 6, Breems also teaches that springs can be used interchangeably with O-rings for shock absorption (column 7, lines 34-36).
